Joomla *ss_site_title* in mass email?

I did this so I can help you if you happen to mass email and see this in your user field. I did not remove the default site descriptor so if you should see this when you send your mass email out you can change it by changing this in the Global tab under the Mail Settings. Just look for the *ss_site_title* and change this to your domain name.

This issue only applies to Joomla 1.7...
