Cannot print Memo in Outlook...

One customer called and when she prints she only sees salutation and header. I thought it was the network printer queue and rebuilt it however that did not fix this issue.

I found this on the internet and the instructions said Reset Memo Style.

That button is buried inside the printer property sheet and you have to click the "Define Styles" button.

Once you click that you can go into the Memo Style "Define Print Styles" and the Reset button is there.

I clicked the Reset button and this fixed the issue with printing Memo's View inside Outlook...
