Found this gem...

Every since MS\$ has started publishing Fix-it links I think these are great...

I have used several of these gems especially the migrate NK2 from Outlook 2007 to 2010. Works better than copying the NK2 to make Outlook 2010 autoloading on first startup. Now I found one to fix the Word keeps crashing issue...

Now I found this MS\$ Fix-it for repairing Word. My Word 2010 kept crashing and running the inbox repair tool inside Add-Remove does not fix this.

Here is the article with the link:

See the KnowledgeBase article "How to troubleshoot problems that occur when you start or use Word 2010, Word 2007, Word 2003, or Word 2002" at:

<http://support.microsoft.com/default.aspx/kb/921541?p=1>

-- Hope this helps.
