---

I take no credit for this entire article. I did plagerize the entire content but thought this would be possibly something someone else needs. Easy enough to do this and you can find the [original article here](#)

.

\*\*\*\*\*

This guide works 100% for Windows 7 and Windows 8 unlike most of the guides out there. I have seen many sites/blogs that have "Install Vista from USB guide" but either with incomplete steps or not working guide. I have also seen some guides that don't use proper commands in this guide. After spending many hours I have come up with this 100% working guide to [install Windows](#) 7 and Windows 8 from USB flash drive.

I just did this method on one of my friends machine and installed Windows 7 and Windows 8 . The main advantage is that by using [USB drive](#) you will be able to install Windows 7 or Windows 8 in just 15 minutes. You can also use this [bootable](#) USB drive on friend's computer who doesn't have a DVD optical drive.

The method is very simple and you can use without any hassles. Needless to say that your

motherboard should support USB Boot feature to make use of the bootable USB drive.

### Requirements:

\*USB Flash Drive (Minimum 4GB)

\*Windows 7 or Windows 8 installation files.

Follow the below steps to create bootable Windows 7/Windows 8 USB drive using which you can install Windows 7 or Windows 8 easily.

### Procedure:

1. Plug-in your USB flash drive to USB port and move all the contents from USB drive to a safe location on your system.
2. Open Command Prompt with admin rights. Use any of the below methods to open [Command Prompt](#) with admin rights.

\*Type [cmd](#) in Start menu search box and hit **Ctrl+ Shift+ Enter**.

Or

\*Go to Start menu > All programs > Accessories, right click on Command Prompt and select Run as administrator.

3. You need to know about the USB drive a little bit. Type in the following commands in the command prompt:

First type **DISKPART** and hit enter to see the below message.

```
Microsoft Windows [Version 6.1.7000]
Copyright (c) 2006 Microsoft Corporation. All rights reserved.

C:\Windows\system32>DISKPART

Microsoft DiskPart version 6.1.7000
Copyright (C) 1999-2008 Microsoft Corporation.
On computer: HOME-PC

DISKPART>
```

Next type **LIST DISK** command and note down the Disk number (ex: Disk 1) of your USB flash drive. In the below screenshot my Flash Drive Disk no is **Disk 1**.

4. Next type all the below commands one by one. Here I assume that your disk drive no is "**Disk 1**".

If you have Disk 2 as your USB flash drive then use Disk 2. Refer the above step to confirm it.

So below are the commands you need to type and execute one by one:

**SELECT DISK 1**

**CLEAN**

---

**CREATE PARTITION PRIMARY**

**SELECT PARTITION 1**

**ACTIVE**

**FORMAT FS=NTFS**

(Format process may take few seconds)

**ASSIGN**

**EXIT**

Don't close the command prompt as we need to execute one more command at the next step.  
Just minimize it.
